For a student with low reading level they now don't have to skip higher math! My dyslexic daughter gets math but her low reading level stood in the way of being successful with most math programs. This is the most clear and simple presentation of Algebra I have ever seen and I have been a teacher for 18 years! It presents and organizes the vocabulary at the beginning of every chapter. It doesn't just give you the steps to perform but helps you understand why those steps solve the problem. She started Algebra in the Abecka book and was doing good although it took a long time to get through. When we switched over I had her review the chapters she had already done. She had done well (every grade over 85 and some 100s) But she redid the chapters because the vocabulary was so much clearer and her comment was with the old program she knew what to do but now she understands why to do it and because she understands she is not skipping any steps anymore. She is now making all A s and is moving through the book at twice the speed. It is so

good to see her confidence grow because she gets it. We bought all pacemaker subjects for next year It has been hard watching her fall further behind in other areas due to her reading but now she can be successful even though her dyslexia seriously limits her reading level.

Just like their Basic Math and Pre- Algebra texts, this book builds on prior learning one concept at a time. The series is so well presented a student could probably use it to learn with little or no teacher support.

The book itself was in great shape but the content is terrible, it is definitely not for someone just learning algebra on their own. For each lesson there is a one page explanation and then one page of problems. Limited to no visuals and if you don't get the very brief explanation that is heavy on example and light on what to do, there are no other options for help in the book.

I received the book promptly and in good condition. My students use it every day.

they can do a better job of explaining concepts they tend to skip a step or two without showing it and that has thrown my daughter off several times
